

Keeping business live 365

By delivering a portfolio of products focused around both software and hardware integration with leading IT vendors, Eaton is exceeding customer expectations within network closets, server rooms, and data center environments. Our comprehensive offering provides everything from blanking panels to virtualized power management software to 24/7 start-up and support, enabling customers to successfully implement an integrated risk averse power infrastructure solution. Save time, save money, and avoid risk by implementing an Eaton solution today.

Organize

- Easily customize your installation with a full line of rack and cable management offerings based on your needs
- Keep servers, switches and storage equipment safe and secure
- Clear the rack area of cluttered network cables
- Improve airflow and reduce cooling costs
- Secure equipment from unauthorized access

Protect

- Provide safe and clean power to IT equipment during power outages, surges and voltage problems
- Reliable and redundant power solutions for critical systems
- Maintain service level agreements
- Eaton software allows for server workload protection, whether moving to available internal servers or to a cloud-based backup recovery site

Distribute

- Effectively measure power usage to all outlets and identify open capacity, resulting in full-power utilization
- Prevent accidental electrical plug disconnect due to bumps or vibrations with outlet level grip retention
- Reduce IP connections required in rack with daisy chain capability
- Ease of installation with multiple mounting options

Manage

- View your power network and all equipment attached to it from your remote/virtual machine console
- Aggregate multiple networked instances
- Monitor the temperature and humidity of your environment
- Receive instant access to alerts and monitor your environment remotely
- Initiate virtual machine migration or graceful shutdown in the event of an extended outage

Maintain

- Enhance reliability and performance with multiple service plan options
- Maintain operational reliability with remote battery test functionality and replacement service
- Dedicated remote monitoring and customer support team available 24 hours a day, 7 days a week, when and where you need it
- Site evaluation offerings for upgrading aged infrastructure
